

Amendments to the Claims

Claim 1 (currently amended): A drainage tray for draining plant treating fluids from a plant pot having a drainage hole in a bottom portion thereof, comprising:

a base member having a bottom with one or more side walls extending generally vertically upward from the periphery thereof, said bottom and said one or more side walls forming a reservoir in said base member for the collection of the fluids from the plant pot, said reservoir having a generally open top portion, said bottom of said base member having an upwardly facing surface and a downwardly facing surface, said upwardly facing surface configured to be generally concave to facilitate flow of the fluids in said reservoir to said inlet of said orifice;

a drainage orifice in said base member, said drainage orifice having an inlet disposed in said reservoir and an outlet disposed outside of said reservoir; and

a tubular member connected to said drainage orifice to receive the fluids from said reservoir through said outlet of said drainage orifice.

Claim 2 (cancelled)

Claim 3 (original): The drainage tray according to claim 1, wherein said upwardly facing surface of said bottom has one or more upper supports extending generally upwardly from said bottom to support the plant pot a spaced distance above said bottom of said base member.

Claim 4 (original): The drainage tray according to claim 3, wherein said one or more upper supports comprises a plurality of ribs in spaced apart relation.

Claim 5 (original): The drainage tray according to claim 4, wherein said ribs are generally inclined downward toward the center of said bottom.

1 Claim 6 (original): The drainage tray according to claim 3, wherein said one or more upper supports
2 are sized and configured to substantially allow flow of the fluids in said reservoir to said drainage
3 orifice.

4
5 Claim 7 (original): The drainage tray according to claim 1, wherein said drainage orifice is integral
6 with said base member.

7
8 Claim 8 (original): The drainage tray according to claim 1, wherein said drainage orifice is disposed
9 in one or said one or more side walls of said base member, said outlet of said drainage orifice
10 extending outwardly from said base member.

11
12 Claim 9 (original): The drainage tray according to claim 8, wherein said drainage orifice is at or
13 substantially near the bottom of said side wall to fully drain the fluids from said reservoir.

14
15 Claim 10 (original): The drainage tray according to claim 1, wherein said drainage orifice comprises
16 a connector disposed in said base member, said connector configured to interconnect said reservoir
17 with said tubular member to drain the fluids from said reservoir.

18
19 Claim 11 (currently amended): The drainage tray according to claim 1, wherein said downwardly
20 facing surface of said bottom comprises one or more stabilizer members extending generally
21 downward from said bottom of said base member, said one or more stabilizer members sized and
22 configured to generally support the center of said bottom higher than the periphery of said bottom.

1 Claim 12 (currently amended): The drainage tray according to claim 11, wherein said one or more
2 stabilizer members comprise at least an inner stabilizer member and an outer stabilizer member, each
3 of said inner stabilizer member and said outer stabilizer member sized and configured to generally
4 support the center of said bottom higher than the periphery of said bottom in a generally circular
5 pattern, said inner stabilizer member disposed generally inwardly of said outer stabilizer member.
6

7 Claim 13 (currently amended): A drainage tray for draining plant treating fluids from a plant pot
8 having a drainage hole in a bottom portion thereof, comprising:

9 a base member having a bottom with one or more side walls extending generally
10 vertically upward from the periphery thereof, said bottom and said one or more side walls forming a
11 reservoir in said base member for the collection of the fluids from the plant pot, said reservoir having
12 a generally open top portion, said bottom of said base member having an upwardly facing surface and
13 a downwardly facing surface, said upwardly facing surface configured to be generally concave, said
14 downwardly facing surface of said bottom having one or more stabilizer members extending generally
15 downward from said bottom of said base member, said one or more stabilizer members sized and
16 configured to generally support the center of said bottom higher than the periphery of said bottom,
17 said one or more side walls having an upper marginal surface thereon, said upper marginal surface
18 configured to support the plant pot thereon;

19 a drainage orifice in said base member, said drainage orifice having an inlet disposed in
20 said reservoir and an outlet disposed outside of said reservoir; and

21 a tubular member removably connected to said drainage orifice to receive the fluids
22 from said reservoir through said outlet of said drainage orifice.
23

24 Claim 14 (original): The drainage tray according to claim 13, wherein said upwardly facing surface
25 of said bottom has one or more upper supports extending generally upwardly from said bottom to
26 support the plant pot a spaced distance above said bottom of said base member.

1 Claim 15 (currently amended): The drainage tray according to claim 14, wherein said one or more
2 upper supports are generally inclined downward toward the center of said bottom sized and
3 configured to substantially allow flow of the fluids in said reservoir to said drainage orifice.
4

5 Claim 16 (original): The drainage tray according to claim 13, wherein said drainage orifice is
6 disposed in one of said one or more side walls of said base member, said outlet of said drainage
7 orifice extending outwardly from said base member.
8

9 Claim 17 (currently amended): The drainage tray according to claim 13, wherein said ~~downwardly~~
10 ~~facing surface of said bottom comprises one or more stabilizer members extending generally~~
11 ~~downward from said bottom of said base member, said one or more stabilizer members sized and~~
12 ~~configured to generally support the center of said bottom higher than the periphery of said bottom~~
13 comprise at least an inner stabilizer member and an outer stabilizer member, each of said inner
14 stabilizer member and said outer stabilizer member configured in a generally circular pattern, said
15 inner stabilizer member disposed generally inwardly of said outer stabilizer member.
16

17 Claim 18 (original): A drainage tray for draining plant treating fluids from a plant pot having a
18 drainage hole in a bottom portion thereof, comprising:

19 a base member having a bottom with one or more side walls extending generally
20 vertically upward from the periphery thereof, said bottom and said one or more side walls forming a
21 reservoir in said base member for the collection of the fluids from the plant pot, said reservoir having
22 a generally open top portion, said bottom of said base member having an upwardly facing surface and
23 a downwardly facing surface, said upwardly facing surface configured to be generally concave, said
24 one or more side walls having an upper marginal surface thereon, said upper marginal surface
25 configured to support the plant pot thereon;
26

1 one or more upper supports on said upwardly facing surface of said bottom, said one or
2 more supports extending generally upwardly from said bottom to support the plant pot a spaced
3 distance above said bottom of said base member;

4 one or more stabilizer members on said downwardly facing surface of said bottom, said
5 one or more stabilizer members extending generally downward from said bottom of said base
6 member, said one or more stabilizer members sized and configured to generally support the center of
7 said bottom higher than the periphery of said bottom;

8 a drainage orifice in said base member, said drainage orifice having an inlet disposed in
9 said reservoir and an outlet disposed outside of said reservoir; and

10 a tubular member removably connected to said drainage orifice to receive the fluids
11 from said reservoir through said outlet of said drainage orifice.

12
13 Claim 19 (currently amended): The drainage tray according to claim 18, wherein said one or more
14 upper supports are generally inclined downward toward the center of said bottom ~~sized and~~
15 ~~configured to substantially allow flow of the fluids in said reservoir to said drainage orifice.~~

16
17 Claim 20 (original): The drainage tray according to claim 18, wherein said drainage orifice is
18 disposed in one of said one or more side walls of said base member, said outlet of said drainage
19 orifice extending outwardly from said base member.

20
21 Claim 21 (new): The drainage tray according to claim 18, wherein said one or more stabilizer
22 members comprise at least an inner stabilizer member and an outer stabilizer member, each of said
23 inner stabilizer member and said outer stabilizer member configured in a generally circular pattern,
24 said inner stabilizer member disposed generally inwardly of said outer stabilizer member.
